

COMPOUNDING WITHOUT
COMPROMISE SINCE 1962

Another Round of Covid-19 Nonsense

Arden Andersen *DO, MSPH, PhD, Colonel USAF(ret)*

In early October (2023), the Lakeview Area News (Lakeview, MI) carried a couple articles titled “Poking the Covid-19 Skunk...” It is amazing how, in 2023, following study after study from around the world showing the predicted problems with COVID vaccinations, the problems with mask wearing, and the corruption around the entire COVID-19 response plan from the White House on down, we still have people contending everyone should get the latest updated COVID vaccine booster. I understand Travis Kelsey of the Kansas City Chiefs making such statements, because he is getting paid a hefty endorsement fee from Pfizer for the ads.

In the following, I give many article direct quotes so as to not mince words or interpretation because the detractors, the people telling the public how safe and effective the COVID vaccinations are, repeatedly attack the messenger, ignoring the message.

“The CDC stated in late summer 2023 that Americans who had received mRNA COVID-19 vaccines were at higher risk of infection from new variants of the virus than those who were unvaccinated.” <https://www.snopes.com/fact-check/cdc-risk-assessment-summary-covid-vaccine/>

Israel has been in the news lately regarding their war with Hamas, but nothing was covered on CNN, NBC, CBS or ABC regarding the death of Israel’s COVID-19 poster child, Yonatan Moshe Erlichman. This 8 year old developed myocarditis shortly after receiving his COVID-19 vaccinations and died of cardiac arrest secondary to COVID-19 vaccination induced myocarditis. Israeli Prime Minister Netanyahu admitted that as a part of the deal for Israel to receive 8 million COVID vaccinations before many other countries had access, Israel agreed to be essentially an epidemiological lab for Pfizer, providing Pfizer with all its digitalized medical data

associated with the COVID-19 vaccination program. Out of this mass population, uninformed consent study came the data showing that the vaccinated had 2.35 times the risk of myocarditis than the unvaccinated and males 16-19 years of age had 8.96 times the risk of developing myocarditis within 30 days of vaccination. But these vaccines are all perfectly safe, so the “experts” say.

A study out of Norway published in September of 2023 showed that 13.1% of peri- and post-menopausal women experienced spontaneous vaginal bleeding post-COVID-19 vaccination. <https://www.science.org/doi/10.1126/sciadv.adg1391>

Another study published in September of 2023 done on inmates at California State Prisons showed that vaccinated inmates had a higher risk of COVID infection than did unvaccinated. DOI: 10.7759/cureus.44684

“Data from the UK Office of Health Statistics show that malignant neoplasm took an extraordinary jump in 2021 and yet greater jump in 2022 in 15-44 year olds. That is alarming. Yes we know that association is not the same as causation so let’s get to the bottom of why this is happening as public data from other westernized countries is showing the same trend. Why is all-cause mortality up particularly in 15-44 year olds? It’s not because their parents and grandparents are living longer. The most noteworthy change in society is the covid-19 vaccines. If it’s not the vaccine, then what is it?” UK - Death Trends for Malignant Neoplasms, Ages 15-44. Analysis of Individual Causes. UK Cause of Death Project Update. Date: October - 2023. Carlos Alegria

“In this study we investigate the UK trends in death rates for malignant neoplasms for individuals aged 15 to 44 by computing excess death rates, which are the difference between observed deaths rates and a given

baseline for expected death rates. We measure and compare changes in the behaviour of mortality patterns before the Covid-19 pandemic with the post-pandemic period for deaths with attributed to malignant neoplasms. We show a large increase in mortality due malignant neoplasms that started in 2021 and accelerated substantially in 2022. The increase in excess deaths in 2022 is highly statistically significant (extreme event). The results indicate that from late 2021 a novel phenomenon leading to increased malignant neoplasm deaths appears to be present in individuals aged 15 to 44 in the UK. We also investigate the equivalent trends in deaths from individual ICD10 codes within malignant neoplasms (C00 to C99 codes). We analyse individually the 10 most common causes for malignant neoplasm deaths, and some causes of particular interest that are gender specific.”

Assessment of Myocardial 18F-FDG Uptake at PET/CT in Asymptomatic SARS-CoV-2–vaccinated and Non-vaccinated Patients. Takehiro Nakahara , Yu Iwabuchi, Raita Miyazawa, Kai Tonda, Tohru Shiga, H. William Strauss, Charalambos Antoniadis, Jagat Narula, Masahiro Jinzaki Published Online: Sep 19 2023 <https://doi.org/10.1148/radiol.230743>

“When compared with nonvaccinated patients, asymptomatic patients who received their second vaccination 1–180 days prior to imaging showed increased myocardial 18F-FDG uptake on PET/CT scans.”

“...emerging evidence suggests that the reported increase in IgG4 levels detected after repeated vaccination with the mRNA vaccines may not be a protective mechanism; rather, it constitutes an immune tolerance mechanism to the spike protein that could promote unopposed SARS-CoV2 infection and replication by suppressing natural antiviral responses. Increased IgG4 synthesis due to repeated mRNA vaccination with high antigen concentrations may also cause autoimmune diseases, and promote cancer growth and autoimmune myocarditis in susceptible individuals.”

Uversky VN, Redwan EM, Makis W, Rubio-Casillas A. IgG4 Antibodies Induced by Repeated Vaccination May Generate Immune Tolerance to the SARS-CoV-2 Spike Protein. *Vaccines (Basel)*. 2023 May 17;11(5):991. doi: 10.3390/vaccines11050991. PMID: 37243095; PMCID: PMC10222767.

The US Vaccine Adverse Event Reporting System, which is all we have presently in this country for collecting adverse event reporting from vaccines, is problematic. The actual numbers of vaccine injuries are much higher than the public is being told per the recent BMJ article.

Is the US’s Vaccine Adverse Event Reporting System broken? *BMJ* 2023; 383 doi: <https://doi.org/10.1136/bmj.p2582> (Published 10 November 2023) *BMJ* 2023;383:p2582

“Our investigation has also found that, in stark contrast to the US government’s handling of adverse reaction reports on drugs and devices, the publicly accessible VAERS database on vaccines includes only initial reports, while case updates and corrections are kept on a separate, back end system. Officials told The BMJ that this was to protect patient confidentiality—but this means that patients, doctors, and other public users of the database have access only to an incomplete and uncorrected version.”

Another issue is even more concerning. Young people are dying at much higher rates since the imposition the COVID vaccinations.

“Chow said there’s a real question of whether the insurance industry can sustain the enormous payouts the excess mortality rates will dictate.”

“The real concern for life insurers lies in preparing for an unexpected wave of death claims and the impact on their assets under management,” she said. “Do they have enough reserves to weather these outflows, given the excess deaths? It’s not just about death or health. It is about the industry’s ability and readiness to manage this monumental outflow.”

“Capgemini just published its World Life Insurance Report that revealed the upcoming largest inter-generational wealth transfer in history that is expected to cause a massive outflow of nearly 40% of life insurers’ assets under management (AUM), totaling \$7.8 trillion, by 2040.”

“When we factor in the rise of payouts on death claims, the magnitude of the situation demands urgent attention by the industry,” the report said.

P.I. Parry, A. Lefringhausen, C. Turni, C.J. Neil, R. Cosford, N.J. Hudson, J. Gillespie, “‘Spikeopathy’: COVID-19 Spike Protein Is Pathogenic, from Both Virus and Vaccine mRNA”, *Biomedicines* 2023, 11, 2287.

<https://doi.org/10.3390/biomedicines11082287>

“The measured all-ages vDFR of (0.126 ± 0.004) % implies that 17.0 ± 0.5 million COVID-19 vaccine deaths would have occurred globally, up to 2 September 2023. It appears that the global COVID-19 vaccination campaign was in effect a mass iatrogenic event that killed (0.213 ± 0.006) % of the world population (1 death per 470 living persons, in less than 3 years), and did not measurably prevent any deaths.

Canadian study of 180 pages: COVID-19 vaccine-associated mortality in the Southern Hemisphere Denis G. Rancourt,1, * PhD ; Marine Baudin,2 PhD ; Joseph Hickey,1 PhD ; Jérémie Mercier,2 PhD 1 Correlation Research in the Public Interest (correlation-canada.org) 2 Santé Liberté OÜ (jeremie-mercier.com) * denis.rancourt@gmail.com”

“The paper is based on 17 countries in the Southern Hemisphere and equatorial region. A definite causal link is shown between many peaks in all-cause mortality and rapid vaccine rollouts. The authors quantify the fatal toxicity risk per injection, which is exceedingly large in the most elderly.”

“The authors conclude that governments should immediately end the policy of prioritizing elderly people for COVID-19 injection.”

We have known for a couple years that the COVID vaccines are contaminated with residual DNA left over from the manufacturing processes, which can lead to autoimmune reactions, genetic aberrations in the receiver, and even stimulation of chronic disease such a cancer.

“The World Council for Health on Monday convened an international panel of scientists and medical experts to discuss recent revelations that COVID-19 mRNA vaccines are contaminated with bacterial DNA plasmids that can harm human health.”

“Data and testimony presented Monday centered around McKernan’s finding, replicated by other researchers, that up to 35% of the content of mRNA COVID-19 vaccines consists of DNA plasmids.”

It is sad in today’s world of amazing technology and scientific advancements that we must be ever so skeptical of our government agents/agencies, and the medical establishment in particular in this regard. If one simply follows the money, the money from Pfizer and other

mega-pharmaceutical companies, the reasoning is revealed. The COVID-19 vaccine campaign has been and still is a huge, multi-billion dollar cash cow for these companies and the pharmacies, doctors, and hospitals administering them. As the research has and continues to show, it’s all at a fatal cost especially for younger Americans.
